

STJ Blockboard

Substrates Collection

STJ Blockboard consists of strips of solid wood sandwiched between two layers of veneers. It is generally manufactured from softwood pieces such as pine or acacia, making it suitable for lightweight construction.

Thickness
Dimensions

15 / 18 / 25 mm

1220 × 2440 mm

Characteristics

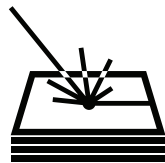

Lightweight Construction

Ideal for cabinet doors and other projects that require a lightweight material.

Excellent Strength

Utilises the structural strength of timber and has a high screw holding ability.

Easy to Machine

Suitable to cut using conventional woodworking machines.
